

SDS PROVIDES A COMPLETE SECURITY SOLUTION.

ONE SOURCE BRINGS ALL THE PIECES INTO PLACE.

THE CHALLENGE

Information security is fast becoming a core requirement for many companies, particularly in the health care industry. Recently, SDS partnered with an international health care organization looking for a trusted source to assess, recommend, advise, and operate an information security and compliance program. Functioning as an outsourced department, SDS provides ongoing security operational support with IDS, patch and vulnerability management facilitation, direction and facilitation of encryption efforts.

To keep the business side informed SDS developed a compliance program dashboard highlighting areas of high, medium and low risks with recommendations to place focus.

THE OUTCOME

1. The health care organization completed successful reviews by a regulatory governing agency and its own internal audit team.
2. Business executives are continually updated on needs specific to information security and compliance.
3. These efforts better positioned the healthcare organization as a single trusted source for international transactions.

While security companies claim experience in a range of disciplines, few bring these services together in a package that strengthens a company's business offerings.

- Security Program Development
- Privacy Compliance
- Information Security Audits
- Operational Security Services
- Security Architecture Design and Analysis
- Compliance Management
- Control Gap Analysis
- Compliance Readiness Services
